

Brainstorming & Idea Prioritization Template

Date	26 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

The following table documents the initial brainstorming session conducted by our team members. We explored various technical approaches across machine learning, data cleaning, and deployment, grouping related suggestions together to streamline our development strategy.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Sathi Krishna Ganeswara Reddy	Use Logistic Regression and Decision Trees for baseline credit classification.	Machine Learning	Group 1
2	Gatreddi Hariprasad	Implement XGBoost and Random Forest to handle complex data patterns and maximize prediction accuracy.	Machine Learning	Group 1
3	Miriyala Makara Jyothi	Build a feature engineering pipeline to convert multi-class payment history codes into simple binary risk labels.	Data Preprocessing	Group 2

4	Tumu Durga Manjusha Krishna Veni	Handle missing demographic values and use encoding to transform categorical data like education and income type.	Data Preprocessing	Group 2
5	Vasanth Vardan Polumati	Create an interactive web app with Flask featuring clear data-entry forms for loan applications.	Web Application	Group 3
6	Miriyala Makara Jyothi	Deploy the final machine learning pipeline on IBM Cloud using Watson ML for real-time API scoring.	Cloud Deployment	Group 4

Step 2: Idea Prioritization

In this stage, we evaluated our grouped ideas based on their technical feasibility (ease of implementation) and business importance (value to the system). This allows us to establish a clear project roadmap, prioritizing core data pipeline tasks before proceeding to application deployment.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Baseline Model Selection (Implementing Logistic Regression and Decision Trees)	High	High	1	Yes

1	Baseline Model Selection (Implementing Logistic Regression and Decision Trees)	High	High	1	Yes
2	Target Risk Feature Engineering (Converting multi-class payment status into binary labels)	High	High	1	Yes
2	Demographic Data Preprocessing (Handling missing values and encoding categorical data)	High	High	1	Yes
3	Flask Application UI Development (Creating user forms and real-time prediction results display)	High	High	2	Yes
4	IBM Watson Cloud Deployment (Hosting the complete ML pipeline as a live web service API)	Medium	High	2	Yes
