

Problem-Solution Fit

Date	26 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

Section Content	Content
Customer Segment(s) [CS]	Bank Credit Analysts, Financial Institutions, Compliance Officers, Credit Card Applicants
Problems / Pains + Frequency [PR]	Manual credit card application review is slow, error-prone, and time-consuming. High volume of applications causes delays and inconsistent decisions.

Triggers to Act [TR]	Increase in credit card applications, need for faster approvals, risk management requirements, and demand for automated decision-making.
Emotions Before / After [EM]	Before: Uncertainty, frustration, delays in approval process. After: Faster decisions, confidence, improved customer satisfaction.
Available Solutions (Pros & Cons) [AS]	Manual verification (accurate but slow), rule-based systems (fast but inflexible), traditional scoring systems (limited prediction capability).
Customer Limitations [CL]	Limited time for manual review, large datasets, human errors, varying applicant profiles, budget constraints.
Behavior + Intensity [BE]	Banks frequently evaluate thousands of applications daily and require quick risk assessment.
Channels of Behavior [CH]	Online: Banking portals, credit application websites, mobile apps. Offline: Bank branches, financial institutions.

Problem Root / Cause [RC]

Manual processing, increasing application volume, difficulty identifying risky applicants, inconsistent evaluation criteria.

Your Solution [SL]

Develop a Machine Learning-based Credit Card Approval Prediction System using Logistic Regression, Decision Tree, Random Forest, and XGBoost. The system analyzes applicant details, predicts approval/rejection instantly, integrates with a Flask web application, and supports cloud deployment through IBM Watson Machine Learning for scalable real-time predictions.
