Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Pre-Application (Eligibility Check)	Stage 2: Form Submission & Processing	Stage 3: Instant Decision & Outcome
Actions <i>What does the customer do?</i>	Navigates to the web portal to check credit card eligibility before applying formally to avoid impacting their credit score.	Enters personal and financial profiles (income type, employment duration, education) into the input form.	Receives an instant automated approval or rejection prediction output on the application dashboard.
Touchpoint <i>What part of the service do they interact with?</i>	Web App Home Page Intro Interface.	Flask interactive online application input forms.	Prediction Result Display Dashboard screen.
Customer Thought <i>What is the customer thinking?</i>	I hope I can check my eligibility safely without a hard credit inquiry lowering my score	Is this form quick to complete? Are my financial details secure on this portal?	Awesome, I got an immediate response! Now I know exactly whether I should formally apply.

Customer Feeling <i>What is the customer feeling?</i>	Anxious and hesitant about rejection risks	Hopeful but cautious while inserting financial metrics.	Relieved and clear about their next financial step.
Process Ownership <i>Who is in the lead on this?</i>	Frontend Developer / UI Team (e.g., Vasanth Vardhan Polumati)	Data Preprocessing & Pipeline Team (e.g., Miriyala Makara Jyothi, TDM Krishna Veni)	ML Modeling & Deployment Team (e.g., S.K.Ganesh Reddy & Gatreddi Hariprasad & IBM Watson API)
Opportunities <i>How can we improve this stage?</i>	Include a clear tooltip text explaining that this soft check will not impact their official credit profile.	Add real-time frontend field validation to catch typing errors before data hits the backend model.	Provide descriptive tips or score factors explaining why an application was predicted as a rejection risk.
