

Data Flow Diagram

Date	26 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	User, Bank Analyst, or Compliance Officer who provides input or receives prediction results
Rectangle with numbered header	Process	Data processing activities such as Data Preprocessing, Model Prediction, and Result Generation
Rectangle (solid fill, no number)	Data Store	Applicant Database, Trained Model Storage, Historical Credit Records
Labeled arrow	Data Flow	Movement of applicant information, prediction requests, and prediction results between components

Example :

The diagram shows how data moves through the Credit Card Approval Prediction System. The applicant enters personal and financial details into the web application. The system processes the data and sends it to a trained machine learning model. The model predicts whether the credit card application will be approved or rejected based on the applicant's information and past credit records. The result is displayed to the user and stored for future use. This helps banks make quick and accurate credit approval decisions.
